

Fabric 8 Website Visual Notes:

✚ When colors are mentioned in this document; please only use our branding colors.

✚ Attached documents related to following notes are:

- Fabric 8 Fonts folder - We Transfer.
- Fabric8_Branding Design Guidelines - We Transfer.
- Fabric 8 _Company Profile - We Transfer.
- Fabric 8 _Leaflet - We Transfer.
- Fabric 8_Branding Assets - We Transfer.
- Inspo for website_Emile Rassam_1 - We Transfer.
- Inspo for website_Emile Rassam_2 - We Transfer.
- Commerial Pictures WeTransfer Folder - We Transfer.
- Inspo for new size layout - We Transfer.
- Products Branding Placement - We Transfer.

General Notes for Website:

1. The Intro for the Website animation looks nice; but the wood-like background should be replaced with our main Brand Pattern, available in attached .ai file (Fabric8_Branding Design Guidelines) exactly in page 13. Let the intro say: (Fabric 8 **"above"** + Uniforms, Solved. **"below"**) both bold and big font, follow our brand typography for "Uniforms, Solved.". Fabric 8 should be the main logo enlarged. **Without any other sentences.**
2. Going back to the homepage shows a transition, give it the same look as the intro; for (Fabric8 & Uniforms, Solved.) Without any extra sentences below.
3. The whole website should use FABRIC 8 TYPOGRAPHY. **We'll attach separate files to install the fonts.**
4. We will attach branding guidelines file to follow for the whole website; while maintaining the original inspirations we wanted from other websites.
5. Remove the home button, only when pressing Fabric 8 do you go back to home page.
6. Underline title when any header tab is selected (or that is currently selected), with **yellow underline color**, to indicate which page is active atm.
7. Change the main Get Quote button at the top of the page to have green font and green outline and when you hover it turns to a fill green button with white font.

8. Add choosing country for where you can change shipping and billing information gathering method.
9. Add Search box on top next to "New Cart Icon" to easily surf the website.
10. The Picture you used for models wearing items we liked, and we thank you for them. However, the logomark on the items should show the correct logomark for Fabric 8, please apply it on to the pictures and show us to confirm.
11. Scaling on how the website should look eventually, should not change from one monitor size to another.
12. All notes we are mentioning in this document should apply and scale correctly on smart phone displays.
13. **Black Top Banner:**

**** The font color in the banner should be changed to Yellow.**

1. **When choosing Shop:** Bring Your Identity to Life. Without "no online prices"
2. **When choosing Services:** Discover How We Can Help> takes user to the "new" Contact Us page to proceed with their inquiries.
3. **When choosing Sectors:** keep as is.
4. **When choosing The Fabric 8 Method:** Read more about our 8 steps method. We will attach a PDF for people to download from this page, Fabric 8 _Leaflet.
5. **When choosing About Us:** keep as is. We will attach an updated version of the company profile.
6. **The order we prefer the tabs on top to be in are:**
 - I. **Services.**
 - II. **The Fabric 8 Method.**
 - III. **Sectors.**
 - IV. **Shop.**
 - V. **About Us.**
7. Quote Cart should be on a separate page by itself that is accessed through **a cart icon button** replacing the "get quote" button on the top right corner of the website and **have the cart in a separate page not at the bottom of the shop.**

14. Footer of the website:

- I. **Move information from below "Fabric 8" to go under "Contact Details" and remove the sentence that says: 1234 Business Solutions LLC.**
- II. **Under contact details: write USA before the USA number and Jordan before the other number. Add a link to reach the Contact Us page.**

- III. Add the Fabric 8 Favicon we are going to attach with this file. The Favicon we want could be extracted from the .ai file (Fabric 8_Branding Assets) in page 3 in the bottom left corner.
- IV. Add placeholders for Social and to have available places to add working links to our socials. Placeholders for (Instagram, Facebook, LinkedIn)
- V. Add a title that says “Overview” and add all the buttons from the top tabs under it expect for contact us.
- VI. Legal: anything that says 1234 Business Solutions LLC please replace with Fabric8.

Homepage:

- 1. Fabric 8 Home Button: should be Black font with a white background like other tabs, the **Fabric 8 should be much bigger and bold**, main logo is without the needle.
- 2. Fabric 8 Home Button: should be animated from original logo to needle while hovering over the button. When not hovering over the button staying as original logo with no needle.
- 3. Modify transition when moving between pages, if we don't get a proper look for transition, it's okay if we don't have one.
- 4. **All buttons, boxes and pop notifications should have round (curved) edges. i.e.: get quote button, all sectors' boxes, mission, vision, etc.**
- 5. Let the base color of the website be plain white and all pictures in main pages be totally borderless to have more of a premium look, while having text directly under the pictures without borders to imply the premium sense of the website. Such as in the Emile Rassam website, from the inspirations we sent earlier. Check attached snips (Inspo for website_Emile Rassam_1&2)
- 6. Replace get quote button from the main picture on the home page with Shop.
- 7. Take a mirror of the shop to show 4-5 items to be shown on the homepage and randomly be changed each time a visitor enters the website. The shop's mirror does not always show (Cap, Chef jacket, Apron, Shirt) as an example, these items always change each time a user re-enters the website. Please use the following idea to preset more items on homepage easier:

Horizontal scroll/carousel “capability belt” — Arrange all 7 icons in a single scrollable row, each one a clickable anchor that jumps to (or expands) its full description below. Great for mobile since it avoids a long vertical list.

8. Add a placeholder for (Brands that Trust Us) on the very bottom of the homepage to show brands that work with us as a supplier “client”.

Shop:

1. Change the phrase “**A uniform partner, not just a catalog**” with “**The Garment Matrix, Made to Order**”
2. There should be **no view details button** on the items, instead clicking at the **item itself** should take the user **to a separate product page** and not in a pop-up window.
3. Maximum only keep 4 items in one row in the shop to make them bigger and look sleeker.
4. Buttons in the shop to change to green when you hover over it. Buttons such as: Categories, upload logo, add blank, etc.
5. In the search bar: write option to search by name, category, sector, or items details/descriptions as keywords.
6. The categories should be as follows:

1st Layer:

1. Food & beverage
2. Hospitality
3. Corporate
4. Healthcare
5. Industrial
6. Education (turn this off but keep it available to turn it on later)
7. Aviation (turn this off but keep it available to turn it on later)

2nd Layer:

1. HEAD WEAR
2. TOP WEAR
3. BOTTOM WEAR
4. OUTER WEAR
5. ACCESSORIES
7. There will be one main color for every product to display in the outer image and when hovering over the image the display should transition between three main images for every item: (Front, Back, Side), these pictures will be

provided as such. We will attach a "Commercial Pictures WeTransfer Folder" that holds several folders in it and each folder will represent a separate product and its variations form (front, back, and side) and different colors.

8. The following items are one size and should not have a dropdown menu for sizes for users to choose from: Caps, Full Aprons, Full Aprons w/ Pocket, Half Aprons, Half Aprons w/ Pocket.
9. Availability should all display as "Made to Order" at the moment but there should be an option for us to change it in the future from the admin panel.
10. In general, the page after clicking on an item is displayed with too many unrequired details directly by the user. The information should be there, but it should not clutter the look of the page. Accordingly, we prefer adding an option to show more/ show less "without the actual words", for these kinds of details to be available but not showing in the face of the user. Furthermore, on this point:
 1. Under the name of the items write only the short description and add a "+" sign to give the user the option to read the full description name it **"Product Details"**.
 2. Add another "+" sign to give the user the option to check out the technical sketch picture of the items, technical sketches for all 25 items will be provided with the same attachment of "Commercial Pictures WeTransfer Folder". Name this **"Technical Sketch"**.
 3. Add another "+" sign to show fabric details such as GSM, Material, Care Instructions "when Available. Name this **"Material Details"**.
11. It's important to have the lead time to show if we like to, but in general we would not like it to be shown for the time being.
12. It's important to have the MOQ to show if we like to, but in general we would not like it to be shown for the time being. But it's okay for the minimum wording to show next to the QTY bar.
13. Color samples in the Product page should be inspired from the colors provided in the commercial pictures for the items we are going to provide to make the color samples look as similar to the actual item.
14. Every product will have several color variations of it in pictures, so once the user chooses a new picture for the item the product page should change the picture to that product color with a smooth transition like we talked about earlier. Colors should move while click- selecting and while hovering, with the same type of transition.
15. Replace the size dropdown with selectable size-buttons that highlight when chosen, using the **Inspo for new size layout** snip as a reference. Unlike the

reference, organize the size buttons vertically, with a QTY box next to each size. This layout should allow users to enter all required sizes and quantities for each product, then add embroidery and printing only once for a more user-friendly experience. The quotation data (**refer to point 24. below**) sent from the website should still show each size and color as a separate row.

16. Please choose proper outline for the color and size selectors in the future. The color of the outline and its thinness should be thin.
17. The Product page aesthetics and animations should all be changed to something better in general please take inspirations from following link: <https://www.formwear.com/collections/all/products/voyager-jacket>
18. Filling out the client's address and details should be a step after checking out from cart in a separate page to finish order, and the website should save the client's details for next time to be available and not ask for it, what is the best practice for this? This page "Filling out the client's address and details" should be available also for general quotes.
19. So, the cart and the details of clients/users should not be shown at the bottom of any pages. It should be on separate pages.
20. We would like to have a new type of transition of pictures in the shop when hovering over a picture of a product, the picture will change to three main looks: front, side, and back for each item.
21. Same type of transition should apply inside the details page of the item itself when changing from one color to another.
22. For transition inspiration, please check out transition for pictures here: <https://emilerassam.com/collections/all> and here: https://www.formwear.com/collections/all?sort_by=created-descending#MainContent
23. Select Customization type: (change this phrase to "**CUSTOMIZATION**")
 - *a separate note whenever I click back on the browser when I am in the branding tool, I always go back to services page, please fix it.
 - 1. The phrase itself is a button that takes you to the branding tool page where you choose to either add text embroidery on the garment or to add your logo.
 - 2. Under the customization button is the "**ADD Blank**" Button that should be replaced with "**ADD TO CART**".
 - 3. After finishing using the branding tool always display the following disclaimer: "Mockup previews are approximate. Final thread colors and print dimensions will be scaled to match your chosen garment size

- specifications." This could be a pop-up no problem or any other way you see fit.
4. For garment customization, certain products should offer only Direct-to-Fabric (DTF) printing, others only embroidery, some both options, and some no customization options at all. Attachment: **Products Branding Placement**. Will assist in understanding the details of this point.
 5. When clicking on **"upload logo"**, we are taken to a page that displays the product's pictures and logo placement and size:
 1. Please delete the option for logo size. For each placement there will be standard sizing:
 - Left chest/right chest: 3.5"-4" W
 - Center Chest (**not of T-shirt**)/ Center Back: 10"-12" W
 - Upper sleeve (next to cuff in short sleeve): 2.5" W
 - Height will always be scalable with width according to logo display.
 2. Choices of **"Finish"** should be **Embroidery** and **Direct To Fabric (DTF) Printing**, only. and make them buttons not a dropdown menu.
 - When choosing Embroidery shows the following note below: *Embroidery is recommended for structured, smaller logos (chest, sleeve, caps, pockets) and holds up best on woven/heavier fabrics. Not pop-up; just smaller text under buttons.*
 - When choosing Direct To Fabric Printing (DTF) shows the following note below: *Direct-to-fabric (DTF) printing is recommended for larger, multi-color, or photo-realistic designs, and works best on flatter areas like full front/back placements on t-shirts and hoodies. Not pop-up; just smaller text under buttons.*
 3. The logo should appear in the correct position on the garment, scaled according to the measurements listed in point 1 above. The placement should look as realistic as possible. For example, when displaying the logo on a sleeve, the branding tool may angle the logo to match the garment view, but the logo itself should remain upright.
 4. The branding tool should automatically treat all uploaded logos as having a transparent background, even if the file format does not normally support transparency.

5. The button in the bottom should be changed from “**Add to quote cart**” to “**ADD TO CART**”.
6. Please visit this link for Inspiration, and choose **embroidered logo**:
<https://www.formwear.com/collections/all/products/monarda-male>
7. We will be sending placement recommendations files for each product separately. Attachment: **Products Branding Placement**.
6. When clicking on “**Text Embroidery**”, we are taken to a page to choose embroidery type, we would like to delete this page, because we do not want to allow the option for emblems. Next, we go directly to designing the text embroidery, in here we have the following notes:
 1. There should not be a size change allowed for the font, always use 14 PX for **line 1** and 12 PX for **lines 2 and 3**.
 2. The font options are acceptable, but they should be displayed as clickable buttons instead of a dropdown menu.
 3. The thread colors are also acceptable, but the color samples would look more premium if they were borderless and used more refined shades.
 4. Allow users to complete the entire customization process on the same page, without moving through separate steps each time, such as clicking “Next” to view the display or embroidery lines.
 5. Template style should always be a straight line, we do not want to provide other options, so there’s no need to have this part to choose from, thank you for the research though!
 6. Choosing placement should also be on the same page without the extra steps.
 7. We will be sending placement recommendations files for each product separately. Attachment: **Products Branding Placement**.
 8. Display summary of the order is okay, keep as is, instead of “**Confirm & Apply**” have an “**ADD TO CART**” button.
 Please visit this link for Inspiration, and choose **embroidered text**:
<https://www.formwear.com/collections/all/products/monarda-male>
 9. Placement editing and general editing for the branding tool should be available on the dashboard.
24. When the user checks out their cart and fills out all their required information, the info should not be sent in a plain email with the details that the user

required as email body text. Alternatively, the info provided by user (products needed “cart” or contact details) should all be reflected in one document that is pushed from the website into an email to hello@thefabric8.com in the form of an excel spreadsheet that shows, client/user information at the top of the sheet and required order details in a table below contact details with an empty column for product price for us to fill according to order size, customization, and logistics. Normally the required columns for products details in such spreadsheets would be: **#, Photo, Product SKU, Product Name, QTY, Size, Color, Product Price, Total.**

Services:

1. Under **Fabric, garment, and fit selection.**
Keep as is.
2. Under **Embroidery, screen printing, and placement. Change this phrase to “Embroidery, (DTF) Direct to Fabric Printing, and Customization.”**
This should take the user to a page where they can directly test how their logos or text will look on our garment with the branding tool found in the shop. This should be a separate page not a pop-up.
3. Under **Procurement, QC, logistics, and after-sales.**
Replace “Start Program” button with the phrase “Get in Touch” linked to the contact us page. Replace the picture to a picture related to logistics and procurement related to the garment and textile fields.

Sectors:

1. In sectors page there should not be any boxes around the logo marks, while keeping the logo mark in **BOLD**, correct positioning for logo mark is enough. Also, every box should have the same color for the same sector, **no mixing in colors.** Align education box to be in the middle.
2. Change the main picture to something more related to the different sectors we serve; we like your taste in pictures, we think you’ll get it right; also, please

change the phrase on the picture from “**Uniform programs for every business environment.**” to “**Uniform Concepts for Every Business Environment**”

3. Replace the small description sentence under “**Uniform Concepts for Every Business Environment**” from “**Sector capabilities from the Fabric8 company profile, now paired with your official sector logo set.**” To “**Explore Our Sector Capabilities**”
4. Since our branding already uses a distinct four-petal “cross” icon in a different color per sector, we’re leaning into that as a system rather than a plain bullet list. A few ways to make it feel custom-built rather than templated:

“Interactive hover cards — Show just the icon + sector name + existing short description in a grid. On hover (or tap on mobile), the card flips and expands to reveal the description, using that sector’s brand color as the accent/background. This turns a static graphic into something visitors explore.”

Add these long Descriptions For each sector:

1. Food & Beverage

We outfit restaurants, cafés, and catering teams with uniforms built to handle the heat of a working kitchen and the pace of a busy floor. From chef coats and aprons to front-of-house polos, every piece can be custom embroidered or printed with your logo, giving your brand a consistent, professional presence from the kitchen to the table.

2. Hospitality

Hotels, resorts, and dining & culinary outlets trust us to deliver uniforms that reflect their brand’s level of service. We supply everything from housekeeping and guest services attire to elegant dining staff wear, all customizable with embroidered logos and monograms that elevate guest experience and staff pride.

3. Corporate

For office, retail, and customer-facing teams, we provide polished, professional apparel that reinforces brand identity at every touchpoint. Polos, button-downs, jackets, and more — printed or embroidered with your company logo — help your team look sharp and unified, whether they’re behind a desk or in front of customers.

4. Industrial

Manufacturing, construction, and logistics workforces need uniforms that are as tough as the job itself. We provide durable, safety-conscious workwear — from cargos to high-visibility gear — with custom embroidery and printing that keeps your crew identifiable and your brand visible on every job site.

5. Healthcare

Hospitals, clinics, and medical facilities rely on us for scrubs, lab coats, and medical uniforms that combine comfort, durability, and a clean, professional appearance. Custom embroidery makes it easy to distinguish departments, roles, and staff — supporting both function and brand consistency in patient-facing environments.

6. Aviation

Airlines and ground-handling services need uniforms that project precision, safety, and professionalism. We supply flight crew and ground staff apparel with crisp tailoring and embroidered detailing, helping your team represent your airline's standards at every gate and on every flight.

7. Education

Schools and academic institutions come to us for uniforms and staff apparel that build a sense of identity and pride. From student uniforms to staff polos and spirit wear, we offer custom embroidery and printing, so every piece reflects your school's colors, crest, and community spirit.

The Fabric 8 Method (to be 2nd tab): "to replace Method tab"

1. In the main picture remove the word "Intentional"
2. Method page could split to two columns and have each four on a side and each box to have an outline color of green and yellow alternating between boxes.
3. "Interactive hover cards — Show just the number + step name + existing short description in an aligned grid. On hover (or tap on mobile), the card flips and expands to reveal the description, using green and yellow brand colors alternatively for each card as the accent/background. This turns a static graphic into something visitors explore."

- Use the long text description for each step from the company profile attached (**Fabric 8 _Company Profile**) Page 9.
4. Change main picture to people in a meeting to drive success.

About Us (instead of About):

1. Change the phrase “**A uniform partner, not just a catalog**” with “**Our Story, Behind the Craft**”
2. Change main picture to people in a meeting to drive success.
3. Delete the phrase “Jordan-based” from the phrase: “Jordan-based B2B uniform solutions for clients who demand brand, purpose, performance, and reliability.”
4. Mission and vision should also look like the boxes in the company profile. However, we will remove the “8” logomark and keep the mission and vision text inside the boxes, titles font color is green, text color inside the box is black as is. (Fabric 8 _company Profile) Page 6.
5. Core values should exactly look like how they are shown in the new company profile version we are going to attach with this document. (Fabric 8 _company Profile) Page 8.
6. Add a paragraph that we’re going to provide for you in the updated company profile. The title of the paragraph is “Sustainability and Compliance”. File name (Fabric 8 _company Profile) Page 15.
7. Remove the Team support signature form the bottom of the page and add a contact us box with CTA the sends directly to Hello@thefabric8.com. This Box includes Email, subject title, dialog box for the body of the matter they are contacting us about. This should be at the bottom of the page or in a separate page all together, not a pop up though, your choice.

Admin Dashboard:

1. The current product dashboard should allow users to both add and remove content, rather than only add it.
2. **There should be a content management dashboard to add and remove ALL content for the whole website rather than only for products. I.e.: pictures, text, what titles and buttons say.**

3. If we get access to the general content of the website we don't need to talk to you about every single sentence/ Picture, we would like to change in the future.
4. We need the ability to enable or disable both first- and second-layer categories at any time, and to add or remove categories as needed.

The categories should be as follows:

1st Layer:

1. Food & beverage
2. Hospitality
3. Corporate
4. Healthcare
5. Industrial
6. Education (turn this off but keep it available to turn it on later)
7. Aviation (turn this off but keep it available to turn it on later)

2nd Layer:

1. HEAD WEAR
2. TOP WEAR
3. BOTTOM WEAR
4. OUTER WEAR
5. ACCESSORIES
5. Placement editing and general editing for the branding tool should be available on the dashboard.
6. Legal and Terms and conditions should be accessible through the dashboard.
7. For garment customization, certain products should offer only Direct-to-Fabric (DTF) printing, others only embroidery, some both options, and some no customization options at all. This should be accessible to modify from dashboard. Attachment: **Products Branding Placement**. Will assist in understanding the details of this point.
8. Gender is not reflected in the Shop, please reflect.
9. Sectors in dashboard in not useful and are not reflected on website/shop. Make this as buttons to choose from, as a product could stand to apply to more than one sector.

10. We should be able to add/remove sizes as we please, as there are some items that require changing letters to numbers like cargo pants and such.
11. We should be able to add/remove colors as we please, as there are some items that require changing colors according to season.
12. There should be a slot available to add fabric care instructions in the future. "**Care Instructions**" should be reflected in the product page and be available to expand and collapse with a "+" sign, such as mentioned in Point 10. In the shop notes.
13. When uploading new pictures, it should be easy for the website to identify the colors and match it to the sample in the shop.
14. Product images should fit the shop frame properly, and users should be able to browse colors and images easily through a carousel-style layout on the product page.
15. "**Technical Sketch**", new tab created in point 10.2 in the product page in the shop should have the accessibility for us to change its image content or description when needed.
